RunBetter Innovations™

Our RunBetter Innovations™ is a continual improvement initiative designed to leverage an existing infrastructure. It assumes you have some system building blocks in place and a desire to 'get more from it', without biting off more than you can chew.

Any ERP platform is expensive to implement and run. You will have leveraged some transformational benefits during its go-live, but your return on investment should not stop there. Innovation should be baked into the life blood of your business and your SAP system should be assisting, facilitating and even creating value.

However, innovations within SAP are challenging. The product set is continually shifting and evolving, enhancements and integrations need to be managed to avoid short-sighted decisions and strategic roadmaps need to be considered. Running parallel is the change management consideration. How are you going to implement an innovation 'running live' with minimal impact to your business?

RunBetter Innovations™ was created to help companies manage their innovation portfolio. Operating at a strategic level down to tactical day-to-day change requests, it helps organisations innovate and add value, whilst not losing sight of the bigger picture.

Every company operates their SAP innovation portfolio differently. Regardless of the appetite, it will contain a blend of projects, change requests, support tickets, technical upgrades and potentially consolidations and acquisitions.

The challenge is 'knitting everything together' whilst not losing sight of your vision.

DESIGN

The Problem

➤ SAP Innovation

SAP are continually releasing new products and versions of their software - with many additional features and benefits. Your initial transformation programme would have been expensive. You need to stay 'current' but at the most cost effective manner available.

➤ The Impact Conundrum

You are now running a live SAP instance. It is probably the lifeblood of your business. You need to innovate safely and securely, without impacting business operations.

➤ Coordination and Management

An innovation portfolio needs to be managed and highly coordinated, being cognisant of many internal and external factors. In short it needs to be planned and directed to achieve an objective over a set time frame, not just evolve organically.

➤ Cost of Change

Change management during the realisation of your implementation roadmap will be the key to success. You need to land your change, no matter how large or small, successfully and competently.

You must innovate with an end goal or vision. Organic innovation is the fastest way to constrain capability.

BUILD

The Process

We break our RunBetter Innovations™ into two broad phases - a roadmapping period and an execution phase. The roadmap takes your business drivers and creates innovation building blocks for you travel down. The execution phase brings it all to life.

Roadmaps

➤ Choose the right path

Coupling your business goals with our knowledge of SAP, the marketplace, industry and latest trends, we work together to create a roadmap for your innovation portfolio.

Highly bespoke to your aspirations, it creates board level collateral in preparation for executive signoff. Importantly it defines your route to success.

Our goal is to align your SAP roadmap tightly to your business vision, leveraging as much value as possible.

Execution

➤ Small Projects

Using the Limelight delivery framework as a guide, our teams assist in the delivery of small projects. Varying from project leadership to architecture and change management, our team take control of your delivery and ensure cost/timelines are met and benefits achieved.

➤ Technical Upgrades

Most roadmaps contain a technical upgrade at some point. This might take the form of an enhancement pack, a move to Business Suite on HANA, a migration to cloud, or even an S/4 upgrade. Regardless of the technical 'move' our team are able to lead and ensure your upgrade is smooth.

➤ Consolidations/Acquisitions

A growing area in the current climate, our delivery teams are able to help you 'fold in' and consolidate SAP instances, often reducing the data footprint and size of SAP system in the process.

➤ Change Requests

Sometimes even the small changes need a little bit of management and coordination to deliver. Our teams are on hand to wrap their delivery arms around even the most simple of changes.

IMPROVE

The Outcome

➤ Business Driven Roadmap

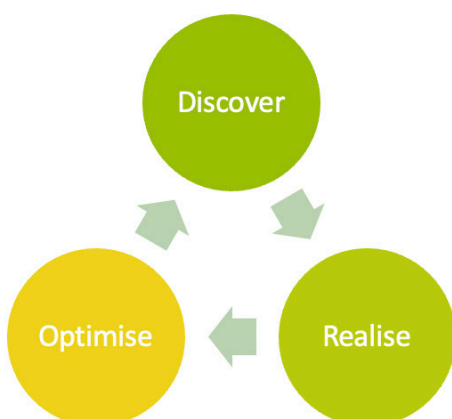

Our goal is to link your business vision into your SAP roadmap, creating additional value and a 'tangible reason' that all executives can buy into and sign off against. This can then feed into your business case - and all your executive team can stand behind it.

➤ Stepping Stone Approach

Find clarity through the options and 'marketplace noise' and clearly identify what you need to do next - and the value it will leverage in your business. We create simple and meaningful content to help explain your vision.

➤ Innovation Delivery

We can provide assistance with your delivery, ensuring you deliver in a timely manner and your journey doesn't stall. We are experts in business mobilisation, project leadership and change management and work alongside any existing technical partner you may already use.

Benefits

➤ Business-led Roadmap

Creating a business led roadmap allows everyone in the organisation to understand the 'why' of the continual innovation. It creates a purpose that everyone can align to.

➤ Organisational Alignment

One of our key goals is that of organisational alignment. Stakeholders are all briefed and the vision, objectives and goals are understood by all. This paves the way for world class change management.

➤ Delivery Capability

After the roadmapping is complete, we can supplement your delivery teams to expand capabilities to ensure you deliver safely and securely - and importantly to the planned timelines.

➤ Team Alignment / Skill Match

Planning in advance allows you plan your internal skills and find the correct technical partner to help you on your journey. With marketwide SAP skill shortages, the sooner you plan the better!

➤ SAP Alignment

Staying relatively close to the SAP roadmap is important - as incremental moves are easier than big jumps. Taking advantage of SAP latest functionality can only help your business flourish.

➤ World-Class Change Management

Our delivery experience has led to the creation of many world class change management assets and capabilities. Secure your projects, large and small, with change that sticks.

About Limelight

Our mission is to support businesses and their people through the entire business transformation journey. We strive to provide exceptional value and deliver long lasting positive change, enabling businesses to flourish.

Limelight are a multi-award winning consultancy specialising in business transformation using SAP technology as a foundation. Operating at the intersection of the systems integrator and the client, Limelight lead transformation programmes, enabling all parties to operate at their true potential. The result is a safe, effective, timely, often cheaper business transformation.

With over 100 years hands-on delivery experience in our executive team alone, we have been fortunate to work with some amazing companies and even more incredible people. Our unique delivery, underpinned by accelerators and a complementary methodology, safeguards your SAP transformation and simplifies even the most difficult implementation.

We deliver career defining programmes, allowing senior executives to sleep easy. It is true peace of mind delivery.

Our Other Accelerators

➤ **RunFast Launchpad**

Start your transformation programme with confidence. Define the vision, document the business case and set up the programme for success - before you start incurring significant cost.

➤ **RunFast Transformation**

Full ongoing management of your transformation programme. From launch through to benefit delivery using our best practice frameworks.

➤ **RunHealthy Audit**

Worried that something doesn't 'feel right'? Our RunHealthy Audit provides a customised, fixed price deep dive into your programme to provide peace of mind

➤ **RunCentre Setup**

Capability assessment and formation of a 'Centre of Excellence' with new structures, tooling and roles to support your new business model.

Our accelerators give us unparalleled advantage in delivering transformation programmes.

GIVING BACK

Our Why

➤ Change the future

One of the most frustrating statistics in our industry is the failure rate of complex transformation programmes. We are highly passionate about what we do and are on a quest to make that a thing of the past.

➤ Change customers

Give customers the experience they deserve and enable them to take advantage of new technology simply and safely.

Our Impact

- When Limelight formed, we decided to put giving at our core and committed fully to the United Nations Global Goals. As such, we work with an organisation called Buy One Give One (B1G1). Through this organisation, for every day of consulting we bill, we give something back to the world - all aligned to the UN Global Goals. Simple, but truly life-changing.

THE GLOBAL GOALS
For Sustainable Development
